1. Operating Precautions

1) Since front polarizer is easily damaged, please be cautious not to scratch it.
2) Be sure to turn off power supply when inserting or disconnecting from input connector.
3) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
4) When the panel surface is soiled, wipe it with absorbent cotton or soft cloth.
5) Since the panel is made of glass, it may be broken or cracked if dropped or bumped on hard surface.
6) To avoid ESD (Electro Static Discharge) damage, be sure to ground yourself before handling TFT-LCD Module.
7) Do not open nor modify the module assembly.
8) Do not press the reflector sheet at the back of the module to any direction.
9) In case if a module has to be put back into the packing container slot after it was taken out from the container, do not press the center of the LED Reflector edge. Instead, press at the far ends of the LED Reflector edge softly. Otherwise the TFT Module may be damaged.
10) At the insertion or removal of the Signal Interface Connector, be sure not to rotate nor tilt the Interface Connector of the TFT Module.
11) After installation of the TFT Module into an enclosure (Notebook PC Bezel, for example), do not twist nor bend the TFT Module even momentary. At designing the enclosure, it should be taken into consideration that no bending/twisting forces are applied to the TFT Module from outside. Otherwise the TFT Module may be damaged.
12) Small amount of materials having no flammability grade is used in the LCD module. The LCD module should be supplied by power complied with requirements of Limited Power Source (IEC60950 or UL1950), or be applied exemption.
13) Severe temperature condition may result in different luminance, response time.
14) Continuous operating TFT-LCD Module under high temperature environment may accelerate LED light bar exhaustion and reduce luminance dramatically.
15) The data on this specification sheet is applicable when LCD module is placed in landscape position.
16) Continuous displaying fixed pattern may induce image sticking. It is recommended to use screen saver or shuffle content periodically if fixed pattern is displayed on the screen.
2. General Description

This specification applies to the 8.4 inch color TFT LCD module.

Designed with wide viewing angle; wide operating temperature and long life LEDs backlight is well suited to be the display units for Industrial Applications.

LED driving board for backlight unit is included in this panel and the structure of the LED units is replaceable.

Built in timing controller and LVDS interface.

The screen format is intended to support the SVGA (800(H) x 600(V)) screen and 16.2M (RGB 8-bits) or 262k colors (RGB 6-bits).

A RoHS product.

2.1 Display Characteristics

Note 1: Measurement method

Equipment: Pattern Generator, Power Supply, Digital Voltmeter, Luminance meter (SR_3 or equivalent)

Aperture 1° with 50cm viewing distance

Test Point Center

Environment < 1 lux
Note 2: Definition of 9 points position (Display active area: 170.4(H) x 127.8(V))

Note 3: The luminance uniformity of 9 points is defined by dividing the minimum luminance value by the maximum test point luminance.

\[ \delta_{\text{W9}} = \frac{\text{Minimum Brightness of nine points}}{\text{Maximum Brightness of nine points}} \]

Note 4: Definition of contrast ratio (CR):

\[ \text{Contrast ratio (CR)} = \frac{\text{Brightness on the “White” state}}{\text{Brightness on the “Black” state}} \]

Note 5: Definition of response time:

The output signals of photo detector are measured when the input signals are changed from “White” to “Black” (falling time) and from “Black” to “White” (rising time), respectively. The response time interval is between 10% and 90% of amplitudes. Please refer to the figure as below.
Note 6: Definition of viewing angle

Viewing angle is the measurement of contrast ratio $\geq 10$, at the screen center, over a 180° horizontal and 180° vertical range (off-normal viewing angles). The 180° viewing angle range is broken down as below: 90° ($\theta$) horizontal left and right, and 90° ($\Phi$) vertical high (up) and low (down). The measurement direction is typically perpendicular to the display surface with the screen rotated to its center to develop the desired measurement viewing angle.
3. Functional Block Diagram

The following diagram shows the functional block of the 8.4 inch color TFT/LCD module:

</tr>
<tr>
<td>Operation Lifetime</td>
<td></td>
<td>50,000</td>
<td>-</td>
<td>-</td>
<td>Hrs</td>
<td>I\textsubscript{F} = 50mA, Ta = 25°C</td>
</tr>
</tbody>
</table>

Note 1: Ta means ambient temperature of TFT-LCD module.

Note 2: VCC, I\textsubscript{VCC}, P\textsubscript{VCC}, are defined for LED B/L (100% duty of PWM dimming)

Note 3: I\textsubscript{F}, V\textsubscript{F} are defined for each channel of LED Light Bar. There are two LED channels (AN1-CA1-CA2) in back light unit.

Note 4: If G084SN05 V9 module is driven by high current or at high ambient temperature & humidity condition. The operating life will be reduced.

Note 5: Operating life means brightness goes down to 50% initial brightness. Minimum operating life time is estimated data.

6.5.2 Input Timing Diagram

![Input Timing Definition (DE Mode)](image-url)
6.6 Power ON/OFF Sequence

VDD power and BackLight on/off sequence is as below. Interface signals are also shown in the chart. Signals from any system shall be Hi-Z state or low level when VDD is off.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>T1</td>
<td>0.5</td>
<td>--</td>
</tr>
<tr>
<td>T2</td>
<td>30</td>
<td>40</td>
</tr>
<tr>
<td>T3</td>
<td>200</td>
<td>--</td>
</tr>
<tr>
<td>T4</td>
<td>0.5</td>
<td>--</td>
</tr>
<tr>
<td>T5</td>
<td>10</td>
<td>--</td>
</tr>
<tr>
<td>T6</td>
<td>10</td>
<td>--</td>
</tr>
<tr>
<td>T7</td>
<td>0</td>
<td>--</td>
</tr>
<tr>
<td>T8</td>
<td>10</td>
<td>--</td>
</tr>
<tr>
<td>T9</td>
<td>--</td>
<td>--</td>
</tr>
<tr>
<td>T10</td>
<td>110</td>
<td>--</td>
</tr>
<tr>
<td>T11</td>
<td>0</td>
<td>16</td>
</tr>
<tr>
<td>T12</td>
<td>--</td>
<td>--</td>
</tr>
<tr>
<td>T13</td>
<td>1000</td>
<td>--</td>
</tr>
</tbody>
</table>

The above on/off sequence should be applied to avoid abnormal function in the display. Please make sure to turn off the power when you plug the cable into the input connector or pull the cable out of the connector.
7. Connector & Pin Assignment

Physical interface is described as for the connector on module. These connectors are capable of accommodating the following signals and will be following components.

7.1 TFT LCD Signal (CN1): LVDS Connector

<table>
<thead>
<tr>
<th>Connector Name / Designation</th>
<th>Signal Connector</th>

</tbody>
</table>
Reminding to check screw’s torque value before fastening panel.
10. Label and Packaging

10.1 Shipping Label (on the rear side of TFT-LCD display)

TBD

10.2 Carton Package

Note:
1. Max. Capacity: 30pcs LCD Modules / per carton
2. Max. Weight: 12 kg / per carton
3. The outside dimension of carton is 405(L) mm x 328(W) mm x 301(H) mm
11 Safety

11.1 Sharp Edge Requirements
There will be no sharp edges or corners on the display assembly that could cause injury.

11.2 Materials

11.2.1 Toxicity
There will be no carcinogenic materials used anywhere in the display module. If toxic materials are used, they will be reviewed and approved by the responsible USMP toxicologist.

11.2.2 Flammability
All components including electrical components that do not meet the flammability grade UL94-V1 in the module will complete the flammability rating exception approval process. The pRxlNted circuit board will be made from material rated 94-V1 or better. The actual UL flammability rating will be pRxlNted on the pRxlNted circuit board.

11.3 Capacitors
If any polarized capacitors are used in the display assembly, provisions will be made to keep them from being inserted backwards.

11.4 National Test Lab Requirement
The display module will satisfy all requirements for compliance to:
